This insightful and provocative book explains why and how the different sides of the brain control the attitudes and behavior of people, noting that people are programmed to be either left-brain or right-brain oriented based on the language they learn from infancy. The author adds that the unique Japanese language programs the Japanese to be right-brain oriented-providing them with a variety of advantages in their arts, crafts, business and personal relationships...attributes that left-brain oriented people [all other major groups of people] do not naturally have and must develop in order to achieve their fullest potential. The book also explains why all women are far more "dual-brained" than men and how they are compelled to use this circumstance when interacting with men. Invaluable insights into human behavior, including sexual relationships.
