This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 Excerpt: ...of the Roebling concrete floors, wire lath and plaster ceilings, concrete column protection and 4" solid concrete and plaster partitions in the rear. The erratic crack in the plastered ceiling in the centre, and the cracks in the concrete partition, were caused by the earthquake. SHREVE BUILDING. Fifth Story. Showing typical condition of the Roebling concrete floors and wire lath ceilings and of the hollow tile partitions and column covering. The protection of the column on the right has fallen away. The hollow tile partitions were carried to the underside of the concrete floors through the wire lath ceilings, and failed in many places from buckling due to expansion. & Co., Jewelers, who occupied the basement, first and second floors of the building. The rest of the building was subjected to a normal fire, such as would be expected in a building of this character. The difference in the efficiency of the two methods of column covering is particularly noticeable in this building. In the three lower stories, where the protection was of concrete, it is entirely uninjured, while in the upper stories, where the protection consisted of 3" hollow tile blocks, and where the fire was less intense, it was badly damaged and has fallen away in numerous places. The concrete column protection was anchored to the columns by means of No. 10 gauge galvanized steel wire wound spirally around them at 12 to 14" centres. The wire is sufficiently stiff to spring away from the plates or flat sides of the column, and affords a key for the concrete between the steel member and the wire. This method of concrete column protection was used also in the main and south offices of the Pacific States T. & T. hfficirnt Concrete r rrn r ve n 1 L r i n... Column Protec--...
