**Bounded and Compact Integral Operators (Mathematics and Its Applications)** David E. Edmunds, Vakhtang Kokilashvili, Alexander Meskhi

The monograph presents some of the authors' recent and original results concerning boundedness and compactness problems in Banach function spaces both for classical operators and integral transforms defined, generally speaking, on nonhomogeneous spaces. It focuses on integral operators naturally arising in boundary value problems for PDE, the spectral theory of differential operators, continuum and quantum mechanics, stochastic processes etc. The book may be considered as a systematic and detailed analysis of a large class of specific integral operators from the boundedness and compactness point of view. A characteristic feature of the monograph is that most of the statements proved here have the form of criteria. These criteria enable us, for example, to give various explicit examples of pairs of weighted Banach function spaces governing boundedness/compactness of a wide class of integral operators. The book has two main parts. The first part, consisting of Chapters 1-5, covers the investigation of classical operators: Hardy-type transforms, fractional integrals, potentials and maximal functions. Our main goal is to give a complete description of those Banach function spaces in which the above-mentioned operators act boundedly (compactly). When a given operator is not bounded (compact), for example in some Lebesgue space, we look for weighted spaces where boundedness (compactness) holds. We develop the ideas and the techniques for the derivation of appropriate conditions, in terms of weights, which are equivalent to boundedness (compactness).

### **From reader reviews:**

#### **Erin Chretien:**

As people who live in typically the modest era should be change about what going on or information even knowledge to make them keep up with the era that is certainly always change and move ahead. Some of you maybe will update themselves by looking at books. It is a good choice for yourself but the problems coming to you is you don't know what kind you should start with. This Bounded and Compact Integral Operators (Mathematics and Its Applications) is our recommendation to help you keep up with the world. Why, since this book serves what you want and want in this era.

#### **Frank Bullard:**

Reading a book can be one of a lot of exercise that everyone in the world loves. Do you like reading book thus. There are a lot of reasons why people fantastic. First reading a e-book will give you a lot of new details. When you read a guide you will get new information since book is one of numerous ways to share the information or perhaps their idea. Second, reading a book will make you actually more imaginative. When you looking at a book especially hype book the author will bring one to imagine the story how the character types do it anything. Third, you may share your knowledge to some others. When you read this Bounded and Compact Integral Operators (Mathematics and Its Applications), it is possible to tells your family, friends and also soon about yours book. Your knowledge can inspire the others, make them reading a publication.

#### **Lester Gibbons:**

This Bounded and Compact Integral Operators (Mathematics and Its Applications) is great guide for you because the content and that is full of information for you who all always deal with world and have to make decision every minute. This particular book reveal it details accurately using great organize word or we can say no rambling sentences inside it. So if you are read that hurriedly you can have whole info in it. Doesn't mean it only provides straight forward sentences but tricky core information with lovely delivering sentences. Having Bounded and Compact Integral Operators (Mathematics and Its Applications) in your hand like obtaining the world in your arm, details in it is not ridiculous just one. We can say that no publication that offer you world within ten or fifteen moment right but this book already do that. So , it is good reading book. Heya Mr. and Mrs. stressful do you still doubt this?

#### **Larry Gregg:**

That e-book can make you to feel relax. This particular book Bounded and Compact Integral Operators (Mathematics and Its Applications) was colourful and of course has pictures on there. As we know that book Bounded and Compact Integral Operators (Mathematics and Its Applications) has many kinds or category. Start from kids until teens. For example Naruto or Private eye Conan you can read and feel that you are the character on there. So , not at all of book are generally make you bored, any it offers you feel happy, fun and loosen up. Try to choose the best book for you and try to like reading which.
