## **Food: The Chemistry of Its Components (Royal Society of Chemistry Paperbacks)**

This volume provides a detailed account of the chemistry of the principal substances of which our food is composed. Both the macro-components - the carbohydrates, lipids and proteins which can be classified by their chemical structures - and the micro-components, the colours, flavours, vitamins and preservatives which are classified in terms of function, are considered. Throughout the book, the author's theme is the relationship between the chemical structure of a substance and its contribution to the properties and behaviour of foodstuffs - whether observed in the laboratory, the factory, the kitchen or the dining room. The book should be of use to students and teachers of food science and related courses in universities, colleges of further education and schools.
